This article has been retracted: Oncotarget's Image Forensics investigation of this paper has found image anomalies. In Figure 6A, there are several areas of internal image duplication and overlap. In addition, according to the data in Figure 3C, there are concerns involving animal experiment ethics with regard to tumor sizes. Though corresponding author Sahdeo Prasad has provided a new file to address the concerns in Figure 6A, no response to the ethics issues has been offered despite the journal's repeated requests for more information. Therefore, the Editorial decision has been made to retract this paper.
